Packaging and Recycling Information (PPWR)

Responsible handling of packaging at ASK Kugellagerfabrik Artur Seyfert GmbH.

Status: 31.07.2026

Our Statement

Dear Business Partners,

As a responsible company, we attach great importance to resource conservation and the recyclability of our materials. In accordance with the requirements of the European Packaging Regulation (PPWR), we provide you with all relevant information regarding the composition and proper disposal of our transport and sales packaging. By separating waste correctly, you actively help to keep valuable raw materials in the cycle.

1 Material Composition & Recycling Specification

Specifications

Our current packaging consists of the following mono-materials, which are optimized for high recyclability:

Paper, Paperboard, Cardboard (PPK):

- Material: Corrugated cardboard / Kraft paper (PAP 20 / PAP 21)
- Recycling Status: 100% recyclable within the existing waste paper cycle.

Plastic Packaging:

- Material: Polyethylene (LDPE 4) / Polypropylene (PP 5)
- Recycling Status: Fully recyclable via valuable material collection. Only recycling-friendly mono-materials without disruptive barrier layers are used.

2 Disposal and Separation Instructions for End Users

To achieve a maximum recycling rate, please separate the packaging components as follows:

1. **Waste Paper Collection (Blue Bin):**
Dispose of all cardboard, cardboard inlays, and wrapping papers in the waste paper. Please flatten cardboard boxes to save transport volume.
2. **Valuable Material Collection (Yellow Bin / Yellow Sack):**
Dispose of stretch films, plastic bags, or plastic strapping bands in the valuable material collection.
3. **Pre-sorting:**
Roughly separate plastic components (e.g., adhesive tapes or document pouches) from the cardboard before disposal, provided this is possible without damaging the material.

3 Declaration of Conformity & Sustainability Standards

Lucid Certification

Our packaging volumes are properly registered in the German packaging register LUCID and fully licensed via a certified Dual System.

Freedom from Harmful Substances

All packaging materials used fall below the legal limit values for heavy metals and are free from substances of very high concern (according to the REACH Regulation and PPWR specifications regarding PFAS freedom).

4 Confirmation

ASK Kugellagerfabrik Artur Seyfert GmbH confirms that the packaging and recycling information contained in this document has been prepared according to the current state of knowledge and on the basis of the available material, supplier, and disposal proofs.

When selecting and using our sales, shipping, and transport packaging, we particularly consider the following principles:

- Use of packaging materials that are as single-variety and recyclable as possible
- Avoidance of unnecessary packaging components and material combinations
- Limitation of the packaging volume to the minimum required for product protection, storage, and transport
- Compliance with applicable substance-related restrictions for packaging
- Proper registration in the packaging register LUCID
- Participation in a Dual System and reporting of packaging quantities, insofar as a statutory system participation obligation exists for the respective packaging
- Regular review and updating of the information in the event of changes to packaging materials, suppliers, or legal requirements

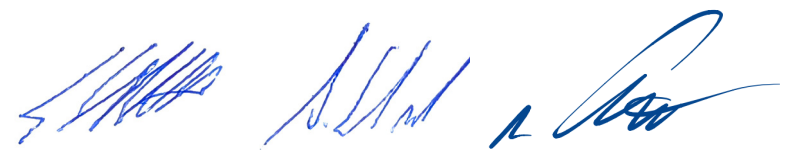

This confirmation refers to the packaging solutions used by our company as of the date of issue. The details will be reviewed and, if necessary, adjusted in the event of relevant changes.

The actual collection, sorting, and recycling of the packaging depend on the respectively available local disposal and recycling structures. Regionally applicable disposal specifications must therefore be observed with priority.
